A NEW METHOD OF ISOLATION OF STYRENE FROM CRUDE BENZOL. [1961] 6p. 24 refs.
Order from OTS or SLA $1.10 61-18188

Condensed trans. of Akademiya Nauk SSSR. Otdelenie Khimicheskikh Nauk. Izvestiya, 1944, p. 763-772.

DESCRIPTORS: *Styrenes, Separation, Chlorination, Chlorides, Benzene.

A method of isolation of styrene is proposed, which is said to have passed the laboratory stage of study. It consists in treating the fraction 135-150° of crude benzol with a 15 per cent solution of sodium hydroxide and then with 5 per cent sulfuric acid. The product, free of phenols and basic compounds, is then chlorinated, and since dichlorostyrene boils at 233-234°, it can easily be separated from the xylenes by distillation, after which dichlorostyrene is dechlorinated at 175° with bog iron ore, reduced at 500-550° with hydrogen or other reducing gases. The yield of dichlorostyrene (Chemistry--Organic, TT, v. 6, no. 6) (over)
